

FLOOR MAT FOR AUTOMOBILE

ABSTRACT

A floor mat for an automobile consisting essentially of one or more porous material layers wherein a water-resistant pressure of the whole floor mat is 40 mmH₂O or more is disclosed. A floor mat for an automobile consisting essentially of two or more porous material layers, wherein at least one of the porous material layers is a mixture layer containing two or more materials including a material other than one or more materials forming a porous material layer adjacent to the mixture layer, and a permeability of the mixture layer is 0.1 to 10 mL/cm²/sec is disclosed.
